Interaction Design

3/31/20

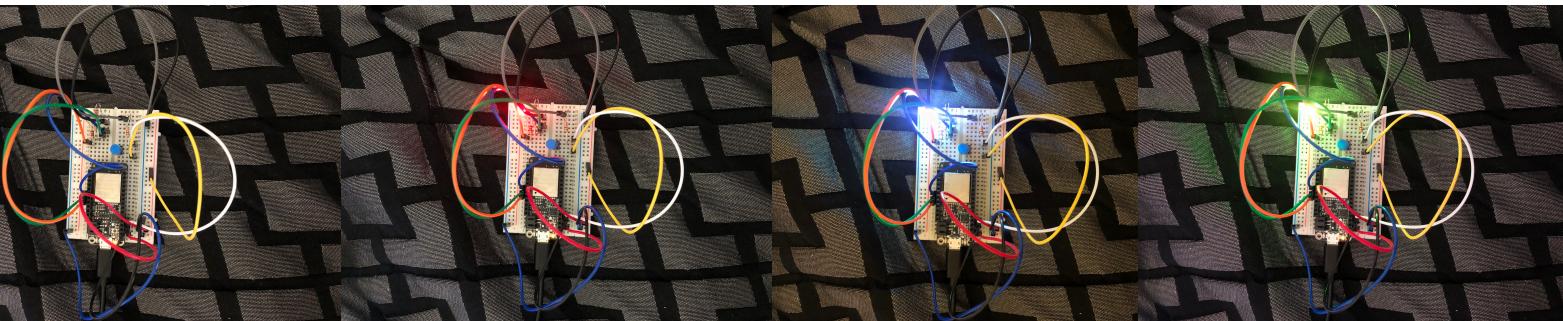

Assignment: Here I created a unique twist to the assignment. My goal was the make an RGB LED to change upon button press and fade it through the colors of red, blue, and green.

To make it work you:

1. 1st click - fades up to red
2. 2nd click - fades from red to blue
3. 3rd click - fades from blue to green
4. Repeat the process

Audience: This assignments audience was just for our class and intended as a weekly assignment.

Interaction Diagram:

Reflections: I had trouble getting this assignment to work. I couldn't get the no-delay to work, but I decided to get creative in a different way. Again, like much of the things that I have been working on, this was frustrating but rewarding in the end. Hop I can figure out how to do it without delay before Thursday for the class.
